

[illegible]

FIG. 2

FIG. 3

$$B_c = 2 \pi f \cdot \frac{m}{e}$$

$e_0$ : ENERGY OBTAINED BY ELECTRON DURING ONE CYCLE OF RF UNDER CONDITION WITHOUT MAGNETIC FIELD

$e_1$ : ENERGY OBTAINED BY ELECTRON DURING ONE CYCLE OF RF UNDER CONDITION APPLIED WITH CYCLOTRON RESONANT MAGNETIC FIELD

FIG. 4

FIG. 5

FIG. 6

FIG.7(A)

FIG.7(B)

$$V_{CM} = \frac{q}{c} = \frac{i_j \cdot (T_0 - T_1)}{(\epsilon_\gamma \epsilon_0 / d) \times K}$$

$i_j$  : ION CURRENT DENSITY

$\epsilon_\gamma$  : SPECIFIC DIELECTRIC CONSTANT OF  
ELECTROSTATIC ATTRACTING FILM

$d$  : THICKNESS OF ELECTROSTATIC  
ATTRACTING FILM

$K$  : ELECTRODE COVERING RATIO OF  
ELECTROSTATIC ATTRACTING FILM

FIG. 8

$$T_{01} : T_{02} : T_{03} : T_{04} : T_{05} = 16 : 8 : 4 : 2 : 1$$

FIG. 9

FIG. 10

$$V_{CM} = \frac{q}{c} = \frac{i_{io} \cdot (T_0 - T_1)}{(\epsilon_r \epsilon_o / d) \times K}$$

REFERENCE  
CONDITION

$$\left\{ \begin{array}{l} i_{io} = 5 \text{ mA/cm}^2 \\ \epsilon_r = 10 \\ d_o = 0.3 \text{ mm} \\ K_o = 0.5 \end{array} \right.$$
